Quick Start Guide

Welcome to Allminds! This guide will show you how to measure client outcomes conveniently, collect client feedback, host virtual sessions and more.

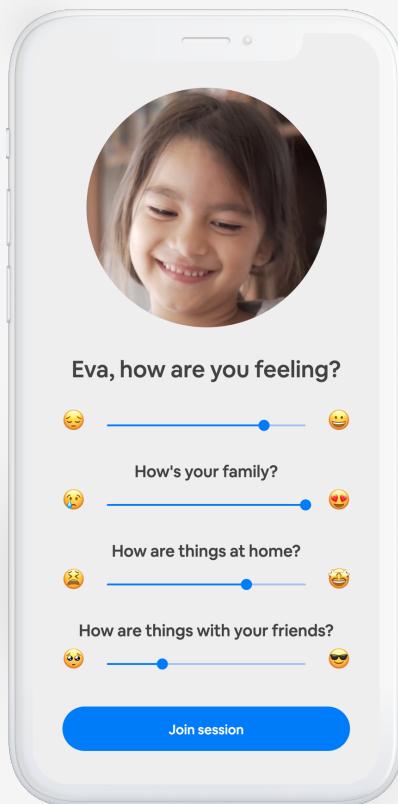

What is Allminds?

Allminds helps you measure outcomes conveniently to reduce treatment failures, improve outcomes, and highlight the great work that you are doing.

Our platform also includes a fully-integrated telehealth platform with tools designed just for therapy (like our sand tray and whiteboard). That way, you can measure outcomes in the office, virtually, or both.

How it works

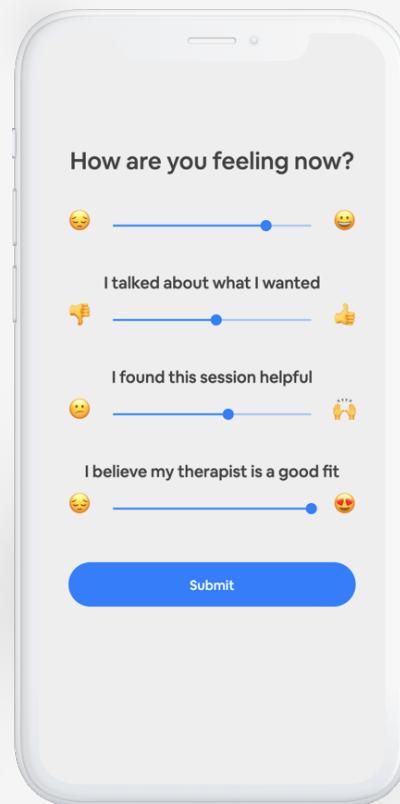

1. Check-in

Clients complete a short questionnaire

2. Therapy

In person or through Allminds video

3. Check-out

Clients share feedback about the session

Adding your clients to Allminds

Bringing your clients to Allminds will allow you to start tracking their outcomes, host sessions, and get their feedback.

STEP 1

Add your client's profile

Log in to Allminds and click “**Add Client**” in the left-hand menu. Save your client’s name and demographic information. A profile page will be created for each client.

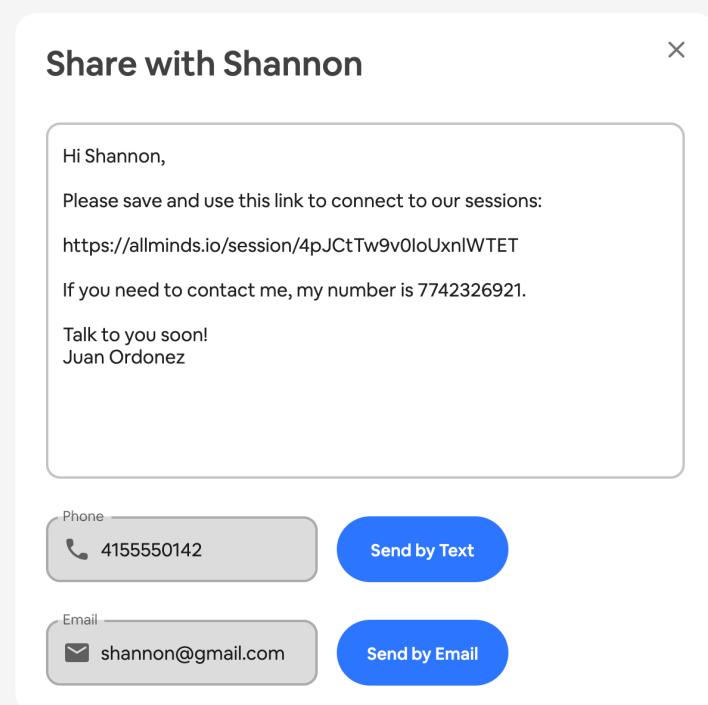

STEP 2

Share link with client

You can invite each client to connect with you on Allminds through a secure link. Simply open your client’s page and click “**Share Link**”.

TIP

Your client can use the same link every week - so you only need to share it once.

Hosting a telehealth session

You can start a video session with a patient in just a few taps. Your clients can join your calls through their secure link. They can use any smart device, and do not need to download an app or create an account.

STEP 1

Start a video session on Allminds

Open the profile page of the client you want to see, and click “**Video Session**”. In the next screen, make sure you grant Allminds permission to access your webcam and microphones. Click “**Join Session**” to start the video call.

TIP

Choose to notify your client via text every time you start a session so they can connect effortlessly.

STEP 2

Wait for your client to connect

Instruct your client to click on their link when they are ready to see you.

Your clients will be asked to complete their check-in questionnaire which is used to measure their functioning.

Then, they will connect to the waiting room and you will be immediately alerted. Click “**Admit**” when you’re ready to see them.

Your client is trying to join the session

Hosting an in-person session

If you're seeing a client in person, you can have them check-in and check-out through Allminds.

That way, you can measure their outcomes and feedback consistently.

STEP 1

Start an in-person session on Allminds

Open Allminds on a device you're comfortable handing over to your client. Open your client's page and click "**In-person Session**".

STEP 2

Check-in your client

Give the device to your client so they can complete their check-in questionnaire. Have them click "**Check In**" when they are done.

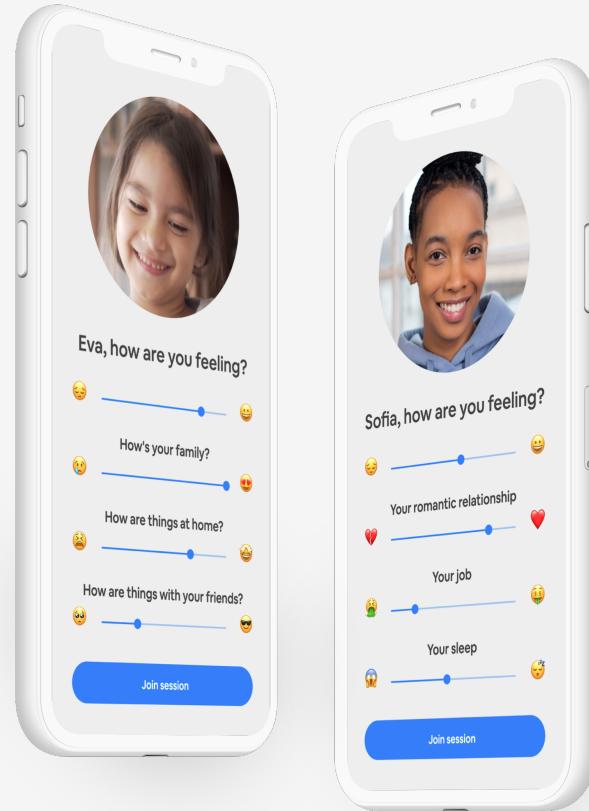

STEP 2

Collect client feedback

Click "**End Session**" when you are ready to finish the session. Hand over the device to your client and have them complete the check-out questionnaire.

Customize check-in questions

You can modify the check-in questions for each client to track different functional domains.

STEP 1 Open the check-in editor

Open your client's profile page and click “Edit Check-In”.

STEP 2 Choose your client's domains

Check the domains that you would like to track for your client. You can also change the language of the questionnaire. Click “Save” when you are done.

TIP

To collect consistent functioning data, we recommend you choose domains at the start of treatment and avoid making frequent modifications.
